Immunologist with multidisciplinary skills in cellular, molecular, bioinformatics and clinical research

Snapshot

I am an energetic ambitious immunologist with a clear goal to build an independent research platform. My research interests include type 2 immune responses, autoimmunity and the implantation of computational approaches to analysis of immune cells and disease outcomes.

My most recent work is currently under revision in the current top ranked Immunology journal. The ideas I generated from this work forms the basis of 2 major grant applications under review where I aim to identify the factors that control mononuclear phagocyte (macrophage) differentiation during inflammation and how this impacts on disease outcomes.

I am ready to educate the next generation of doctors and scientists and lead my own group to make transformative discoveries in Immunology. I have a passion for enhancing research capacity through implementation of formalised structures to address the challenge of both generating 'omics' technology data and integrating this data with clinical databases.

I acted as official ‘external mentor’ of a PhD student in Wellcome Trust in Immunomatrix in Complex Disease PhD program in Manchester. My teaching philosophy is Think-Pair-Share - a method to keep students engaged by creating a mini student led discussions in class.

Outreach and organisation

Discover Research Night, Dublin Sep 2014. Marie Skłodowska-Curie-funded. I was the event organiser responsible for public engagement at Trinity Biomedical Sciences Institute, organising a team of 50 researchers in leading themed tours of scientific facilities. We were the most subscribed event of Dublin Research Night (>500 members of the public) 8 weeks’ full-time.

10th International Symposium on Bordetella, Sep 2013. Logistics manager responsible for operations of the conference including registration, AV equipment and support for speakers.

Manchester Immunology Group Seminar Series, May 2017 – Sep 2018. Co-lead organiser. Handling invitations, hospitality, communications, for renowned international speakers to visit University of Manchester.

School talk, Oaklands Community College, Edenderry Co. Offaly, 2021. “The life of a scientist”.

TCD Omics Core facility. I formed a working group in 2021 to address the competitive disadvantage of not having a working single cell RNA-sequencing in TCD. The service was soft launched internally in 2022 on a cost-for-service basis and delivers a full pipeline from consultation, cellular isolation, library preparation, sequencing, bioinformatics and basic downstream analysis. I am to expand this to a full service and hire talent to expand the capability of this service to include external industry clients.
